

INDUSHREE BYRAREDDY

☎ (716)939-5642 ✉ indubyrareddy@gmail.com  [LinkedIn](#)

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, C, C#, HTML, CSS, SQL, Linux Shell scripting
Web Development: jQuery, Bootstrap, ReactJs, SpringBoot, Django, Node.js
Cloud & Infrastructure: AWS, GCP, Linux, Git, Jenkins, Docker, Kubernetes,
Databases: PostgreSQL, MongoDB, Redis
Data & AI/ML: PyTorch, OpenCV, Pandas, NumPy, Scikit-learn, GANs, Data Pipelines
Other Skills: System Design, Microservices, CI/CD, distributed Systems, Unit Testing, Debugging

Experience

Software Developer - Profile DM Inc. Remote

Dec 2025 – Present

Skills: Java, Spring Boot, React, TypeScript, Python, RESTful APIs, SQL, NoSQL, AWS, CI/CD

- Designed and deployed Java (Spring Boot) services powering candidate intake, role-matching, and client workflow APIs for internal recruitment platform, integrating third-party systems (ATS, email, calendaring) via OAuth 2.0 and REST.
- Built React dashboard components for recruiter and account-manager workflows, surfacing candidate pipeline status, requisition health, and placement KPIs with sub-second load times.
- Modeled PostgreSQL schemas for candidate, requisition, and placement records, and contributed to Dockerized AWS CI/CD pipelines supporting automated testing and reliable production releases.

Software Engineer - HeronAI Buffalo, NY

Mar 2025 – Oct 2025

Skills: Python, Java, Spring Boot, Django, JavaScript, React, Pandas, PostgreSQL, Redis, AWS, Docker, Kubernetes

- Designed and deployed Python (Django) and Java (Spring Boot) microservices serving RESTful and GraphQL APIs for a multi-tenant SaaS platform, delivering real-time business analytics to 10+ small business clients.
- Built HubSpot and QuickBooks sync pipelines with OAuth 2.0, Pandas-based schema normalization, and unified persistence to PostgreSQL and AWS S3, processing 50K+ daily records across 10+ client configurations.
- Enforced platform-wide security via JWT authentication, RBAC, and OAuth 2.0 for third-party integrations, eliminating unauthorized cross-tenant data access across all API surfaces.
- Reduced API latency by 35% and database CPU load by 20% by optimizing PostgreSQL query plans, restructuring multi-tenant schemas, and introducing Redis caching on high-frequency endpoints.
- Containerized services with Docker, published to AWS ECR, and orchestrated zero-downtime deployments to AWS EKS via Kubernetes and Helm, achieving zero deployment failures over 6 months.
- Integrated OpenAI GPT-4 with prompt engineering and context management over live PostgreSQL data, enabling natural language business queries and eliminating manual report generation for end users.
- Built React and TypeScript dashboard components consuming GraphQL APIs, surfacing live HubSpot and QuickBooks KPIs including revenue trends, deal pipelines, and expense summaries with sub-second load times.

Software Engineer - Cognizant Bengaluru, India

Nov 2021 – Aug 2023

Skills: Node.js, Java, Spring Boot, Kafka, PostgreSQL, MongoDB, AWS, Jenkins, Docker, Kubernetes

- Delivered Node.js and Java (Spring Boot) microservices for PepsiCo's One Touch platform, exposing store profile, ticketing, and operational data for 10,000+ US retail locations at 99.9% uptime.
- Engineered a configurable ticketing system with automated assignment rules and multi-tier escalation logic, cutting average ticket resolution time by 30% and eliminating manual triage across distributed operations teams.
- Implemented Kafka producers and consumers handling 50,000+ daily ticket and store-alert events, guaranteeing at-least-once delivery across 8+ downstream microservices.
- Modeled PostgreSQL schemas and MongoDB collections for structured and variable store data, achieving a 40% query performance gain through composite indexing and query plan analysis.
- Managed Docker builds, Kubernetes workloads, and Jenkins CI/CD pipelines, cutting manual deployment steps by 60% and sustaining continuous delivery across a two-year client engagement.

Projects

Image Deblurring using GANs | Python, PyTorch, OpenCV

Sep 2024 – Dec 2024

- Trained a GAN on 10K+ motion-blurred image pairs with a U-Net generator and PatchGAN discriminator, achieving 30% PSNR improvement on benchmark datasets via custom perceptual loss functions, learning-rate scheduling, and data augmentation pipelines.

Education

University at Buffalo, The State University of New York

Aug 2023 – Dec 2024

Master of Science in Computer Science

Buffalo, NY
